PREPARED FOR LORENA BACIGALUPO | DIXIE CULLEN INTERESTS

Why this is worth a closer look

Based on our most recent call, you asked for a brief explanation and company info. This one-pager keeps it simple.

Nodal Point
Lewis Patterson
Director of Energy Architecture
l.patterson@nodalpoint.io

WHAT YOU SAID ON THE CALL

You handle the electricity agreements, you get calls like this every week, and you wanted a short note on why we were reaching out plus a little company context.

> "Send me a brief explanation on why you're reaching out to me and information on your company, and then I'll see where it goes."

> You also confirmed Dixie Cullen Interests runs about **300,000 sq ft** of climate-controlled storage. That is exactly the kind of footprint where rate and demand costs can hide.

B.I.G. LOGISTICS EXAMPLE

LOWER PRICE PER KWH

Rate down

We helped reduce the cost for each unit of electricity, not just the headline contract rate.

PEAK-USAGE FEE

Demand trimmed

We cut the charges tied to peak demand, which is where warehouses often get hit the hardest.

ANNUAL SAVINGS

$30,000+

The result was over thirty thousand dollars in yearly savings using cost-efficient solutions.

WHY IT WORKED

Two levers, one outcome

We looked at the power price itself and the demand charges separately. When both are tightened, the savings are usually much bigger than chasing one line item alone.

WHY IT MATTERS

Storage space creates load

Facilities like Dixie Cullen can have hidden cost pressure even when operations look stable. The bill often tells a different story than the day-to-day business does.

WHAT HAPPENS NEXT

One bill, quick read

Send one recent bill. I will tell you in plain English whether there is anything worth a future conversation. If not, I will say that too.

SIMPLE NEXT STEP

- Share one recent electricity bill from Dixie Cullen Interests.
- We will check the rate, demand charges, and any avoidable waste.
- You get a clear yes/no on whether a deeper review is worth your time.

CALL TO ACTION

If you want, send the bill and I will take a look. If there is real room to save, I will show you. If the bill is already tight, I will tell you that too.
