PREPARED FOR KILLAM DEVELOPMENT

Energy Cost Verification Proposal

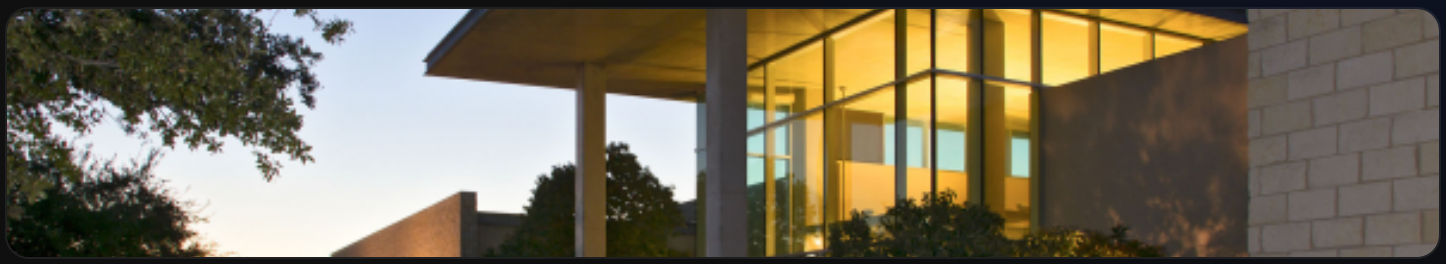
GERARDO, WHY I REACHED OUT

You mentioned Killam already has broker support, and that makes sense. My goal is not to replace what is working. My goal is to give Killam a fast, independent verification that there are no hidden utility cost leaks across your portfolio.



WHY THIS MATTERS FOR KILLAM SPECIFICALLY

Large Portfolio Effect

Killam's industrial and commercial footprint means small billing inefficiencies can compound into meaningful annual spend.

South Texas Load Volatility

In ERCOT territory, peak demand events and pass-through structures can create costs that are easy to miss in standard reviews.

Industrial Site Complexity

Multi-tenant and distribution-heavy properties often carry demand and delivery structures that require meter-level validation.

Low Disruption Approach

This can run in parallel with your current legal and broker process, with no immediate contract change needed.

WHAT NODAL POINT WILL DELIVER

1) Bill Forensic Review

Check for delivery, pass-through, and demand-ratchet charges that may be avoidable.

2) Contract-to-Load Check

Compare current agreement assumptions to actual usage behavior to identify mismatch risk.

3) Executive Findings Summary

One-page result with plain-English findings and clear next actions.

4) 48-Hour Turnaround

After we receive one recent utility invoice from one site.

RECOMMENDED NEXT STEP

If you share one recent invoice from a single Killam property, I will return a concise findings brief within 48 hours so your team can confirm whether current pricing and fee structure are fully optimized.

Respectfully, Lewis Patterson III | Nodal Point
